DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because in the lines bridging the second and third lines from the end, the word "and" is repeated.
2. Claims 5-9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not depend, either directly or indirectly, from another multiple dependent claim. See MPEP § 608.01(n).

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-9 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 11/484,796. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims are obvious over the copending claims. Copending claims 1-13 recites a first stage reaction of nitrile rubber with compound V, a hydrogenation stage, and further process details including all claimed limitations of instant claims 1, 4, 6, 8 and 9, and therefore selection of the claimed process from the scope of copending claims would be obvious because the copending claims have disclosed all features from within a small range of alternatives. Regarding claim 2, copending claim 9 recites a solvent, implying the use of homogeneous conditions. Regarding claim 3, in-situ hydrogenation would be obvious because the copending claims do not recite any separation of the first stage product prior to hydrogenation. Regarding claim 5, use of a quantity within the claimed range would be obvious because applicants have claimed essentially the entire reasonable range of compound:rubber ratios. Regarding claim 7, use of the claimed solvents would be obvious because the copending claims recite a solvent and claim 7 recites only conventional solvents.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented. Applicants are advised that a corresponding obviousness-type double patenting rejection does not appear to be possible in the copending application over this application because the copending claims recite additional structure not recited in the instant claims (i.e., a third

comonomer). Therefore, the current rejection would likely not be withdrawn even if it becomes the sole remaining issue.
